

Ideas into Impact: The George Institute Distinguished Fellows program

 The George Institute
for Global Health

At The George Institute for Global Health, we're focused on the world's top killers: non-communicable diseases (NCDs) and injury.

We're a 600 plus person world class medical research organisation operating in 50 countries with 4 major centres in Australia, China, India and the UK. Our mission is to improve the lives of millions of people around the world.

We believe that practical, cost effective approaches to managing chronic disease offer unparalleled opportunities to help people live longer, healthier lives.

But we don't just want to research answers and solutions, we want to drive impact.

To complement our world class research, The George Institute is launching a unique global health policy think tank and thought leadership effort focused on NCDs. We want to share our insights, challenge the status quo and foster the kind of debates and discussions that lead to changes in health delivery.

Do you want to be part of this? Are you a leading health researcher, health policy expert, policy maker or health advocate?

Through The George Institute's Distinguished Fellows program, ***you can*** contribute to the global debate.

As a GIDF, you'll stay right where you are, at your own organization. We'll support your thought leadership work, helping to amplify your insights to key stakeholders and fora around the world.

Our Fellows will be driving the conversations around NCDs and improved systems for prevention and treatments. You will do this through blogs, videos, social media and discussion papers. We'll even support you leading an event to highlight specific challenges and solutions or sponsor your conference presentation or similar announcements related to your research. GIDFs also can seek the opportunity to engage directly with stakeholders in Beijing, Delhi, Oxford or Sydney. Our social media, design, events and media teams will help you throughout.

The George Institute Distinguished Fellows Program. Ideas and solutions to reduce the burden of NCDs and improve people's health.

**WORLDWIDE,
70%
OF DEATHS ARE DUE TO
NCDs**

**CARDIOVASCULAR
DISEASES KILL
2x AS MANY
PEOPLE AS
CANCER**

**1 in 10
PEOPLE
DIE FROM
INJURY**

The George Institute For Global Health:

We're improving the lives of millions of people worldwide through innovative health research. Working across a broad health landscape, the Institute conducts clinical, population and health systems research aimed at changing health practice and policy worldwide.
